

Strategic Programme: CityVerve

CityVerve was an IoT demonstrator project taking place in Manchester.

Operating across a number of themes, including Health and Social Care, CityVerve demonstrated how technology could meet the complex needs of local communities.

Funded by a £15 million grant from Innovate UK, CityVerve was a complex collaboration of twenty partners covering the commercial, public and academic sectors.

TRUSTECH was engaged by Manchester University NHS Foundation Trust to develop and deliver the Health and Social Care theme of CityVerve

TRUSTECH support:

- Developed the original use cases for the Health and Social Care theme.
- Created implementation, collaboration and operational structure plans.
- Established a second-level project plan covering project initiation.
- Recruited project managers to oversee delivery of projects and effective capture of data.
